This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by capturing excess electrical energy during periods of low demand and storing it in other forms until needed on an electrical grid. The energy is later converted back to its electrical form and returned to the grid as needed.

Powerwall is a home battery that provides whole-home backup and protection during an outage. See how to store solar energy and sell to the ...

The plant will be the largest hybrid project in Germany, with enough capacity to save around 32,000 tonnes of CO2 emissions annually, according to Statkraft's calculations.

When New York City's largest battery storage installation is complete, it will be able to power more than 10,000 households during ...

When New York City's largest battery storage installation is complete, it will be able to power more than 10,000 households during peak demand periods. It will also be the ...

Tesla has signed its first deal to build a grid-scale battery power plant in China amid a strained trading relationship between Beijing and Washington.

Elevate Renewables is developing a utility-scale energy storage facility at the Essex Generating Station located 5 miles from New York City in Newark, New Jersey.

The world's first intelligent grid-forming photovoltaic and energy storage power station, tailored for ultra-high altitudes, low ...
