King Magnetics is a professional designer and manufacturer of high quality nanocrystalline core, amorphous core and high performance soft magnetic components. Over a decade, we provide ...

These cores are manufactured with cobalt-based Metglas(R) amorphous alloy 2714A for high frequency applications. These flat loop toroidal cores offer a unique combination of ultra-high ...

The efficiency of this core is very high, it can operate at high frequencies, and it can handle up to 5kW with just one core having a diameter of 64mm. If you like my video, give me a cup...

Amorphous magnetic cores allow smaller, lighter and more energy efficient designs in many high frequency applications for Invertors, UPS, ASD (Adjustable speed drives), and Power supplies ...

King Magnetics is a professional designer and manufacturer of high quality nanocrystalline core, amorphous core and high performance soft ...

Amorphous cores are made from a highly disordered atomic structure, often achieved by rapid solidification of the material during manufacturing. This disordered structure results in unique ...

While Amorphous cores remain vital in large-power filtering and lower-frequency applications due to their high saturation flux density and cost advantages, Nanocrystalline ...

High frequency power transformer (inverter transformer) is a kind of transformer widely used in ac/dc conversion. Nanocrystalline materials can effectively reduce the volume of iron core.

LaminaCore"s amorphous E cores deliver modular magnetic performance, low core loss, and easy coil

mounting--ideal for SMPS, telecoms, and industrial inverters.

The work here to create an amorphous core material using less exotic trace elements for high switching frequencies has produced some interesting initial results.

Amorphous C cores have high saturation flux density, low core loss, high permeability. They are suitable for PFC choke, output filter inductor, solar inverter inductor, large current reactor, ...
