Solar Glass: Architects and builders can use transparent or semi-transparent PV glass in windows, skylights, and curtain walls to produce electricity ...

Vitro will manufacture Solarvolt (TM) BIPV modules using both glass-glass composite -- solar panels with solar cells arranged between two glass lites -- and glass-film techniques.

Seamlessly integrates high-efficiency photovoltaics into architectural glass. From transparent panels to large-format, patterned, and insulated designs, our solutions combine clean energy ...

Thanks to its transparency and various finishes, photovoltaic glass fits perfectly into contemporary architectural designs without compromising energy performance.

BIPV solar glass is ideal for a wide variety of architectural applications, offering custom glass types, solar cell patterns, and energy efficiency levels to match any building design.

Designed with longevity in mind, the eFacade PRO system resists dirt accumulation and fading. With self-cleaning glass and long-life materials, eFacade PRO requires minimal upkeep.

Solar Glass: Architects and builders can use transparent or semi-transparent PV glass in windows, skylights, and curtain walls to produce electricity without blocking natural light.

Photovoltaic solar glass is an advanced building material designed to convert solar energy into electricity. This technology integrates solar cells into glass panes, enabling windows, facades, ...

BIPV solar glass is ideal for a wide variety of architectural applications, offering custom glass types, solar cell patterns, ...

Crafted with heat-treated safety glass, our photovoltaic glass provides the same thermal and sound insulation as traditional options, flooding spaces with natural light. Perfect for facades, ...

The Solarvolt BIPV glass system replaces traditional facade cladding materials and enhances commercial building exteriors by providing sunshading, overhead glazing, CO2-free power ...

Architectural solar control glass is specially designed glass that manages sunlight entering a building. It reduces glare, controls heat gain, and enhances energy efficiency without...
