What is a Grade B solar panel?

Grade B solar panels have visual defects but meet performance specifications. These solar panels are less common than grade A solar panels but are typically available from manufacturers upon request. Most manufacturers keep these panels for testing purposes but sell them with warranties like grade A solar panels.

Do you sell grade B solar panels?

A's are typically the most advertised and sold. However, some do sell grade B solar panels upon request. Most factories keep grade B solar panels for testing as they can't be sold at the same price as grade A panels but perform the same. However, overflow grade B panels are sold to the public.

What is the grading system for solar panels?

The grading system goes A for the best, B for visually defective panels but meet performance benchmarks, C for visually and performatively defective solar panels, and D for broken solar panels. Most manufacturers and distributors only sell grade A and B solar panels, scrapping C solar panels and recycling D solar panels.

Do grade B solar panels affect performance?

Grade B solar panels have some visual defects that do not affect performance. Grade B naturally falls below grade A in this grading system. So how does Grade B stack up against the other grades? Grade A solar panels are entirely free of defects. Grade B has some visual flaws but still meets performance standards.

Grade B solar panels typically fall under the market value and are sold at lower prices than grade A solar panels. If you need solar panels for a countryside barn or remote ...
