-----

The results of the determinations of the protosolar chemical composition, as well as the initial and present-day mass fractions of hydrogen, helium, and metals (X,Y,Z) for the solar system are ...

Our solar system consists of an average star we call the Sun, the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto. It includes: the satellites of the planets; ...

The differences between solar and photospheric abundances outside uncertainty limits need to be understood. However, neither comparison reveals obvious systematic trends with chemical ...

This chapter will propose a brief (and not exhaustive) review on the results of the Italian scientific community in the field of the exploration of our planetary system with a focus on the ...

Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which is over even longer periods of time emitted through the Sun's outer layer, the photosphere. This ...

The chemical composition of Earth's crust, oceans, and atmosphere can be studied, but this is only a minute fraction of the mass of Earth, and there are many composition ...

At the center is the Sun, composed mostly of hydrogen and helium and containing most of the solar system's mass. Next comes an inner system of four small planets (the terrestrial planets, ...

More importantly, it is the composition that, once concentrated to the solar system, through chemical and physical processing gave rise ...

Explore the fascinating composition and structure of the solar system, including planets, moons, asteroids, and

their roles in our cosmic neighborhood.

The chemical composition of the solar system is mainly dominated by the composition of the Sun, which has 98.9% of the mass of all bodies in the system.

Overview Definition Formation and evolution General characteristics Sun Inner Solar System Outer Solar System Trans-Neptunian region

Our solar system consists of an average star we call the Sun, the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and ...
