FEMP helps plan and implement distributed energy projects including on-site electric and thermal renewable energy and energy storage technologies.

This guide offers practical insights to help businesses avoid common pitfalls, maximize returns, and ensure their distributed energy investments deliver lasting value.

2025 Distributed System Implementation Plan. New York State Electric & Gas and Rochester Gas and Electric.

Based on the optimal planning scheme of distributed energy storage systems obtained in the previous section, the economic costs of each component of the rural ...

In this paper, based on the study on the low-carbon transformation of urban distribution networks, we conduct research on planning and scheduling energy storage ...

This section will help you identify potential project barriers; estimate their impacts on your project in terms of additional time, money, and expertise required; and formulate plans and strategies ...

Based on differentiated demands, a two-layer optimal configuration model of distributed energy storage is proposed and solved by using the improved particle swarm ...

We analyze how distributed resources impact grid reliability, operations, and planning, and how they can be integrated cost-effectively to deliver unique benefits to the power system. ...

DERs include a diverse and evolving set of technologies. The scope of this roadmap encompasses DERs such as distributed solar photovoltaics (PV), distributed wind, distributed ...

Motivated by these goals, this paper introduces a long-term Mixed-Integer Nonlinear Programming (MINLP) multi-objective stochastic optimization planning model to ...
