As MIT's first vice president for energy and climate, Evelyn Wang is working to broaden MIT's research portfolio, scale up existing innovations, seek new breakthroughs, and ...

The air-cooled battery thermal management system (BTMS) is a safe and cost-effective system to control the operating temperature of battery energy storage systems (BESSs) within a ...

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron ...

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed ...

They investigated the effects of the total height of steps and the height of each step on the maximum temperature, temperature difference, and temperature standard deviation of ...

One critical aspect of setting up a BESS container is the installation of racks and air ducts, which ensure the proper functioning and cooling of the battery system. In this article, ...

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future grid dominated by carbon-free yet intermittent energy sources, ...

Unlocking its secrets could thus enable advances in efficient energy production, electronics cooling, water
