Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short.

In a country better known for snowdrifts than sunbeams, solar power might seem like an unlikely success story -- yet Finland is quietly engineering a renewable energy surge that defies its ...

The share of solar power in Finnish electricity production is approaching one percent and won't stop there: plans are in place to build several solar farms in Finland, each ...

Explore the rapid growth of solar power in Finland, backed by EUR16.6M in subsidies. See how Finland's solar energy strategy is paving the way to carbon neutrality.

Spring was the best period for generating solar PV energy, and autumn was the least favourable for generating solar PV energy in the Arctic. Rooftop inclined solar PV have a ...

Solar power pays off in Finland and the Baltic countries, as despite our Nordic location our production potential is comparable to that of Central European countries. Although the amount ...

Finland's northern location places limitations on the amount of annual solar energy production, but it offers an excellent addition to electricity production in the spring-autumn ...

In a country better known for snowdrifts than sunbeams, solar power might seem like an unlikely success story -- yet Finland is quietly engineering a ...

Many Finns are already familiar with solar power: solar panels can be found on the roofs of many homes,
