What is a Cornell Dubilier supercapacitor?

Cornell Dubilier supercapacitor products are offered in a full range of capacitance values and configurations. This enables utilization of supercapacitors in a variety of industries and applications for many power requirements needs.

What is the specific power of a supercapacitor?

The rapid charging and discharging of supercapacitors is reflected in their specific power, a parameter with units of watts per gram (W/g). Power is the rate of receiving or delivering energy ( $p = dW/dt$ ). The specific power of supercapacitors far exceeds that of the lithium-ion battery.

Are supercapacitors better than batteries?

Unlike batteries, which store energy chemically, supercapacitors store energy electrostatically. This enables rapid charging, making them ideal for applications demanding quick energy replenishment. However, their energy density is typically lower than that of batteries, limiting their use for long-term energy storage.

How long does a supercapacitor hold on charge?

The longer the supercapacitor is held on charge the lower the leakage current of the device. The reported leakage current is a measurement of the charging current after holding the device at rated voltage for 72 hours continuous at room temperature.

The new series of cylindrical electrochemical double-layer capacitors offers excellent pulse power handling characteristics based on the combination of very high capacitance and very low ESR.

Supercapacitors, also called ultra capacitors or double layer capacitors, are specially designed capacitors that possess very large values of capacitance--as high as ...

Our technology is used in a wide variety of applications from battery backup in smart meters to regenerative braking. Choose from board mountable ...

Supercapacitors, also called ultra capacitors or double layer capacitors, are specially designed capacitors that possess very large ...

Offers high capacitance values in a through-hole stacked coin type package. Provides capacitance values ranging from 10F to 220F, low ESR, and high current handling.

Supercapacitors also known ultracapacitors and electric double layer capacitors (EDLC) are capacitors with capacitance values greater than any other capacitor type available today.

SuperCapacitors are a valuable technology for providing a unique combination of characteristics, particularly very high pulse power and capacitance densities.

Our supercapacitors have been developed to meet the growing need for sustainable energy storage in wireless electronics. They offer the same benefits as conventional supercapacitors ...

High performance solid-state electric double layer capacitor from redox mediated gel polymer electrolyte and renewable tamarind fruit shell derived porous carbon.
