-----  
What is the power system of Tajikistan?

In Tajikistan, the power system has a total installed capacity of 5190 MW, with 93.9% (or 4973.142 MW) coming from hydro power plants. The remaining 6.1% (or 318 MW) comes from thermal power plants.

How much electricity is generated in Tajikistan?

Annual electricity generation in the Tajik energy system, consisting mainly of hydro power plants, is 16.5 billion kWh. It should be noted that more than 98% of electricity in Tajikistan is generated by hydropower plants, including 97% - by large and medium HPP.

What is the share of thermal power plants in Tajikistan?

In Tajikistan, thermal power plants account for a share of 6.1% (318 MW) in the electricity generation. It should be noted that more than 98% of electricity in Tajikistan is generated by hydropower plants, including 97% from large and medium HPP. The share of thermal power plants is relatively small.

Does Tajikistan have a hydro power plant?

With abundant water potential from its rivers, natural lakes and glaciers, Tajikistan is almost exclusively reliant on hydro for electricity generation. It is home to some of the world's largest hydropower plants and is ranked eighth in the world for hydropower potential with an estimated 527 terawatt-hours (TWh).
