Should consumers invest in their own electricity storage capacity?

In Finland, traditionally, about two-thirds of the consumer electricity bill has consisted of taxes and transmission costs. Consumers who also have their own production (e.g., PV panels) could thus potentially, in the future, make savings when investing in their own behind-the-meter electricity storage capacity.

Is vehicle-to-grid charging a future source of energy storage?

Vehicle-to-grid charging, the discharging of electric vehicle batteries to the grid, is another potential future source of energy storage that should not be overlooked. Vehicle-to-grid charging is not yet a common technology, but it could change in the future.

What is the storage capacity of a water tank thermal energy storage?

The total storage capacity of the TTES in operation is about 11.4 GWh, and the storage capacity of the TTES under planning is about 4.2 GWh. Table 7. Water tank thermal energy storages in Finland. The Pori TTES will be used for both heat and cold storage. The charge/discharge capacity for cold storage is 1 MW.
