How much lithium will India need by 2032?

India is expected to see a cumulative demand of 600-900 GWh of lithium batteries by 2032, driven by electric mobility and energy storage needs. The country imported \$3.59 billion worth of lithium-ion batteries in FY 2023, with over 100 companies engaged in battery pack manufacturing.

How many lithium battery manufacturers are there in India?

There are 100+ lithium battery pack manufacturing companies in India supplying batteries to EV, power electronics, and stationary storage markets in India. With the Government's support under the ACC-PLI scheme 30 GWh Lithium-Ion Cell production has been awarded to 3 companies and another 10 GWh is in tendering stage.

Who can benefit from India's lithium supply chain report?

The report can support several Indian ministries, state-owned enterprises, such as Khanij Bidesh Limited (KABIL), as well as industry actors in India seeking to establish a presence in the global lithium supply chain.

Why is lithium important to India?

India's geostrategic allies and competitors have long recognized the importance of lithium in maintaining their industrial competitiveness and have taken steps to secure access to lithium resources through direct investments in overseas mines and long-term supply agreements, as well as setting up processing and refining capabilities.

Beijing has adopted a three-fold strategy to secure lithium supply by 1) increasing foreign investment in overseas mines, 2) leveraging the Belt and Road Initiative to forge partnerships ...

In December 2023, a Hyderabad battery-materials startup (Altmin) signed a technology-and-supply deal with Bolivia's state lithium ...

Driven by ambitious 2030 renewable energy targets (500GW non-fossil capacity) and growing grid stability needs for variable solar/wind, India is rapidly tendering renewable ...

In December 2023, a Hyderabad battery-materials startup (Altmin) signed a technology-and-supply deal with Bolivia's state lithium company YLB, aiming to build LFP ...

Energy Storage Systems (ESS) Policies and GuidelinesEnergy Storage Systems (ESS) Policies and Guidelines

India is expecting a cumulative demand of 500+ GWh LiB batteries by 2030. With these huge opportunities, India is also working on appropriate safety standards considering the ...

Given the anticipated growth in lithium demand in India, it is essential for policy-makers to consider a range of short-term and long-term strategies to secure lithium supply.

The Indian Ministry of Power has issued a directive requiring a minimum 20% local content in all battery energy storage system (BESS) projects implemented under the Viability ...

India is expected to see a cumulative demand of 600-900 GWh of lithium batteries by 2032, driven by electric mobility and energy storage ...

Summary: India's lithium power storage project bidding is reshaping the renewable energy landscape. This article explores market trends, key opportunities, and how businesses can ...

Driven by ambitious 2030 renewable energy targets (500GW non-fossil capacity) and growing grid stability needs for variable ...
