This environment facilitates comprehensive investigations into EV behavior, charging strategies, control algorithms, and user interactions. It provides a platform for ...

The study optimizes the placement of electric vehicle charging stations (EVCSs), photovoltaic power plants (PVPPs), wind turbine power plants (WTTPs), battery energy ...

To enhance the quality of charging services and mitigate the risk of insufficient solar power generation due to consecutive unfavorable weather conditions, which may leave ...

The integrated Photovoltage-Storage Charging Station (PS-CS) encompasses a synergistic configuration, comprising a Photovoltaic (PV) system, an energy storage system, ...

The purpose of this analysis is to assess the viability of using solar energy (and renewable energy in general) for the decarbonisation of steel manufacturing and to identify the boundary ...

This environment facilitates comprehensive investigations into EV behavior, charging strategies, control algorithms, and user ...

This study aims to identify the national potential for solar power generation in China, as well as the production status of steel plants, and to explore the feasibility of achieving low ...

With the growing demand for sustainable and versatile energy solutions, an NEV with V2L, V2G, or V2H capabilities is more than just a car--it's an investment in the future.

To pursue sustainability and decrease emissions, an increasing number of steel companies tend to seek help

Investment in Two-Way Charging of Photovoltaic Containers in Steel Plants

from renewable energy. Integrating solar photovoltaics (PV) at steel plants is ...

The authors examine two subsidy options and explain the choice of optimal strategies for government and manufacturer.

A "bidirectional charging" EV trial is under way that, in years to come, could help solve the UK's energy conundrum.

To enhance the quality of charging services and mitigate the risk of insufficient solar power generation due to consecutive unfavorable ...
