First-ever look at baby planets forming in a newborn solar system like ours. Astronomers have, for the first time, captured what they ...

Using both ground- and space-based telescopes, the team zeroed in on the young star HOPS-315, 420 parsecs from Earth, at the start of a most exciting time: its planet-forming ...

The widely accepted modern variant of the nebular theory is the solar nebular disk model (SNDM) or solar nebular model. [1] It offered explanations for a variety of properties of the Solar ...

Astronomers caught a star system at the moment when solid grains began to form planets. This snapshot reveals how planets first start ...

The observations, published in the science journal Nature, show a glowing, lightning bug-like system against the dark void -- a cosmic nursery where planets may one ...

Astronomers caught a star system at the moment when solid grains began to form planets. This snapshot reveals how planets first start to form, just as Earth once did.
