Does space Norway own fibre optic cables?

Space Norway owns and manages two fibre optic subsea cables that provide stable internet connectivity to Longyearbyen, the main Norwegian settlement in Svalbard. These cables also connect to the research station at Ny-Ålesund. Ny-Ålesund, located at 79° North in Spitsbergen, is the world's northernmost settlement.

Why is space Norway a key player in the space sector?

Space Norway holds strategic significance in the nation's space sector initiatives. This transaction is poised to create a significant Norwegian satellite operator, consolidating control over satellites and contributing to the enhancement of Norway's standing as a prominent player in the realm of space activities.
