When choosing an outdoor power supply, you can consider using high-quality lithium-ion batteries (such as opto-mechanical outdoor power supplies), because they usually ...

A portable power station's lifespan is largely determined by its battery cycle life. This means the amount of times it can be charged and recharged before capacity drops.

Most modern power stations, including Pisen's models, use lithium batteries, which typically last hold 500 to 1,000 charge cycles (battery cycle life) before their capacity drops to ...

Cycle life refers to how many complete charge-discharge cycles a battery can undergo before its capacity declines noticeably. For example, a battery with only 500-800 cycles may start to ...

However, understanding the battery life and cycle count of portable power stations is crucial for optimising their performance and longevity. In this ...
