As the Washington State agency with jurisdiction over public sector labor relations and collective bargaining, PERC assists parties in resolving labor-management disputes.

Check all of the following that are true: In patients with low suspicion for PE (best-guess pre-test probability $\leq 15\%$) AND all are true, only 0.9% had PE (n=7527) and it can be ruled-out without ...

There is no need to apply the PERC rule to those patients who are not being evaluated for PE. If the patient is considered low-risk, PERC may help avoid further testing. If the patient is ...

Learn how propane and renewable propane are paving the road to tomorrow's green power generation. Explore innovations in propane technology across all industries.

The PERC (Pulmonary Embolism Rule-out Criteria) rule can be used in the initial evaluation for pulmonary embolism (PE) in low-risk patients to exclude the diagnosis of PE based on ...

Introduction: The PERC (Pulmonary Embolism Rule-out Criteria) Rule is utilized by physicians to avoid further testing for pulmonary embolism in patients deemed to be at low risk.

This PERC calculator (Pulmonary Embolism Rule-out Criteria) gives you a quick look at the PERC criteria, which can help you determine if the patient is likely to have a pulmonary embolism.

This PERC rule calculator is used to rule out patients that are already deemed to have a low risk of pulmonary embolism to allow searching a different diagnosis.

In patients with a low probability of PE who fulfill all eight criteria, the likelihood of PE is low and no further testing is required. All other patients should be considered for further testing with ...

Use PERC only if you're already thinking "this patient probably doesn't have a PE," or if Wells determines your patient to be low risk. Applying PERC in someone at moderate or ...
