---

Our program focuses on the development of high-throughput, low-cost processes for perovskite photovoltaics.

It discusses the recent progress in perovskite crystal structure engineering, device construction, and fabrication procedures that has led to significant improvements in the photo ...

We print solar cells in various shapes and sizes, adapting their design to meet product demands. This optimizes the available surfaces without compromising performance.

This review provides a comprehensive overview of the progress, challenges, and future prospects of PSCs. Historical milestones, including unique properties of perovskite ...

The solar office supports R& D projects that increase the efficiency and lifetime of hybrid organic-inorganic perovskite solar cells.

NLR offers a range of tools and capabilities for R& D in perovskite materials and devices. The synthesis of novel precursors enables new perovskites or highly stable materials ...

A perovskite solar cell A perovskite solar cell (PSC) is a type of solar cell that includes a perovskite-structured compound, most commonly a hybrid organic-inorganic lead or tin halide ...

NLR offers a range of tools and capabilities for R& D in perovskite materials and devices. The synthesis of novel precursors ...

These innovative cells offer lower manufacturing costs, simpler fabrication processes and greater mechanical flexibility compared with traditional silicon cells.

It discusses the recent progress in perovskite crystal structure engineering, device construction, and fabrication procedures that has led ...

The new layer covers the bumps in the perovskite layer, creating a smoother surface that enables the stable mass production of the perovskite solar cell. As it also improves durability, the ...

Perovskite solar cells are a high-efficiency, low-cost alternative to traditional silicon-based solar panels. With the perovskite solar cell industry expected to reach \$1.2 billion by...
