-----

**Methods:** This article proposes a two-stage wind-storage coordination planning method that considers source-load uncertainty. The approach is based on an improved antlion ...

To address these deficiencies, this paper introduces a bi-level planning model for distributed energy storage that incorporates the influence of extreme weather on transmission ...

Based on this, this paper first constructs the SOC output characteristic model of energy storage and considers the DLC and time-of-use price as well as different demand ...

New York State Electric and Gas Corporation("NYSEG") and Rochester Gas and Electric Corporation("RG&E" or collectively the "Companies") present their 2025 Distributed ...

Meeting these milestones will require investment in renewable generation, as well as storage, energy efficiency measures, electrification of the transportation and heating sectors, and ...

The integration of renewable energy sources into power systems has introduced complexities that necessitate advanced optimization strategies for efficient energ

Based on this, this paper first constructs the SOC output characteristic model of energy storage and considers the DLC and time-of-use price as well as different demand response types. The ...

For promoting the coordinated development of clean energy and power grids, this paper took large-scale adoption of wind and solar energy as planning goals and establishes a ...

Facing challenges posed by extensive renewable energy integration in power systems, this research presents a generation-storage coordination strategy using CPSDRL.

To address the challenges of integrating wind and photovoltaic power into the grid, it has become effective to plan the coordination of wind and photovoltaic power generation ...
