Electric vertical take-off and landing (eVTOL) aircraft have gained considerable interest for their potential to transform public services and meet environmental objectives. Designing an ...

In order for electrical energy to be used efficiently, it must be stored. This article reviews energy storage technologies used in aviation, specifically for micro/mini Unmanned ...

We propose to propose an Ai-powered recharging system, where the UAVs and the charging stations are viewed as a multi-agent system. The goal is for the agents to ensure run the ...

In order for electrical energy to be used efficiently, it must be stored. This article reviews energy storage technologies used in aviation, ...

The contents of this study focused on solving the energy storage problem through research, experiment, and simulation based testing of the application of hybrid energy storage ...

This work presents a power supply solution and energy management control for an all-electric hybrid energy storage system that integrates supercapacitors and batteries to enhance eVTOL ...

The system includes one or more shelves attached to a holding structure, the one or more shelves being configured to support one or more unmanned aerial vehicles (UAVs), the one or ...

The investigation of power sources for quadrotor UAVs includes conventional batteries, fuel cells, and hybrid systems, with a thorough analysis of the advantages and ...

Scalable Mobile Energy Storage Container for Unmanned Aerial Vehicle Stations

These innovations aim to improve energy efficiency, reduce size, and increase the payload capacity of drones, making them more ...

These innovations aim to improve energy efficiency, reduce size, and increase the payload capacity of drones, making them more viable for long-endurance missions.

Offering an all-in-one approach to dynamic field deployment, the standardized, modular BDUAS containers provide highly mobile transport and storage of UMS Skeldar's ...
