-----

Singapore could sit at the "core" of new regional electricity grids in Southeast Asia, according to research from Rystad Energy.

Singapore will achieve its target of having "giant batteries" to store at least 200MW of energy three years early. The 200MW system is ...

The project has since been enhanced with an increase to the total capacity to up to 200MW, and the commencement of the Malaysia-Singapore flow brings us closer to realising ...

By investing in power system connectivity and procuring clean electricity from its neighbours, the country will promote clean energy and facilitate multilateral power trade, allowing renewables ...

The Singapore government has implemented a good number of initiatives to ensure the resilience of the energy grid, including the use ...

Singapore's government and Energy Market Authority (EMA) have announced power sector and grid enhancements, including a ...

The Roadmap, to be launched later this year, will set the direction to build Singapore's future grid capabilities through a combination of research and development, pilot ...

The report details existing hydropower and solar photovoltaic (PV) links between Singapore, Thailand, and Laos, and points to further planned connections with other countries ...

To maintain grid reliability, Singapore is deploying Energy Storage Systems (ESS) to address solar

intermittency and enhance grid resilience. In February 2023, Singapore officially ...

Our goal is to build a sustainable future energy mix by harnessing the four supply switches of solar, regional power grids, emerging low-carbon alternatives and natural gas. We ...

Singapore's government and Energy Market Authority (EMA) have announced power sector and grid enhancements, including a possible expansion of Southeast Asia's ...

The Singapore government has implemented a good number of initiatives to ensure the resilience of the energy grid, including the use of energy storage systems ("ESS").
