# Small Cell Communications Administration

---

Why are small cells used in telecommunications?
In telecommunications,small cells are used to improve the performance and efficiency of cellular networks. They provide targeted wireless coverage in areas where traditional cell towers cannot provide strong signals.
What is a small wireless facility?
Note: small wireless facilities are also referred to as small cells. This document serves as an informational document and provides an overview of small cell technology,deployment,and infrastructure. The intended audience of this document is city staff,planning commissioners,elected officials,and community members. 1.
What is the FCC's small cell order?
o The Order is a blatant effort by the FCC to strengthen the hand of carriers in negotiations with local governments over small cell deployment and to limit the ability of local governments to negotiate in the public interest around small cells.
How do small cells work?
Small cells can be deployed using various radio access technologies,such as 4G LTE,5G,and Wi-Fi,and they can be connected to the core network using wired or wireless backhaul links. The deployment of small cells can improve network coverage,capacity,and quality of service for wireless users.

Small cell stations will help manage the demand for wireless services as the City grows. By design, they improve access to wireless services in places where coverage is low (or "spotty"), ...

Small cells are designed to enhance network coverage, capacity and data throughput in high-traffic or densely populated ...

Small cells are designed to enhance network coverage, capacity and data throughput in high-traffic or densely populated environments, such as airports, stadiums, office ...

We work with you to implement procedures that keep you in control. Working for you, with the wireless

carriers. We review applications and verify that your policies and processes are ...

Adopting nationally standardised procedures and criteria for small cells based on international recommendations benefits ...

Small cell stations will help manage the demand for wireless services as the City grows. By design, they improve access to wireless services in places ...

The Federal Communications Commission has streamlined environmental and historic preservation review processes for small wireless facilities under the National Environmental ...

The Provider shall ensure the compatibility between the existing State or local agency infrastructure and the Provider"s proposed Small Cell Facility, as well as between existing ...

In the Small Cell Order, the FCC reaffirmed its interpretation that a locality can violate the "effective prohibition" language of Sections 253 and 332 by enacting regulations that merely ...

On September 27, 2018, the FCC released a Declaratory Ruling and Third Report and Order (FCC 18-133, identified throughout this document as Small Cell Order or FCC Order) that ...

Small cells are low-powered cellular radio access nodes that have ranges from around 10 meters to a few kilometers. They are base stations with low power consumption and cost.

Small cells can be deployed using various radio access technologies, such as 4G LTE, 5G, and Wi-Fi, and they can be connected to the core network using wired or wireless ...
