There are now 262 gigawatts direct-current of solar capacity installed nationwide, enough to power 45 million homes. In the last decade, solar deployments have experienced an average ...

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be ...

The American Clean Power Association (ACP) is the leading voice of today's multi-tech clean energy industry, representing energy storage, wind, utility-scale solar, clean ...

Solar and storage combined will account for 81% of new US generating capacity additions in 2025, with solar comprising over 50%, projected to add 32.5 GW. In 2024, power ...

The following resources provide information on a broad range of storage technologies.

The data are grouped according to seasonal characteristics while preserving their temporal correlations. o The dataset provides hourly profiles of solar power output, demand, ...

NLR offers a diverse range of data and integrated modeling and analysis tools to accelerate the development of advanced energy storage technologies and integrated systems.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. battery storage already achieved record ...

Berkeley Lab collects, cleans, and publishes project-level data on distributed* solar and distributed solar+storage systems in the United States. The data are compiled from a variety of ...
