-----

Astronomers have proposed Planet Y, a hypothetical world that could be orbiting unseen in the far reaches of our solar system. Find ...

To test whether a hidden planet could be responsible, scientists built models that dropped an Earth sized body into the outer solar system and let gravity do the rest.

A sizable world has been found in a part of the solar system that astronomers once thought to be empty. It probably qualifies as a ...

Is there a massive undiscovered planet on the outer reaches of the Solar System? The idea has been around since before the discovery ...

An illustration showing Planet Nine, a hypothetical, undiscovered planet in our solar system.

Astronomers have proposed Planet Y, a hypothetical world that could be orbiting unseen in the far reaches of our solar system. Find out more in this short video from ...

Each new discovery in the Solar System reshapes our sense of place in the cosmos. Now, astronomers are once again pointing to the possibility of an unseen world - one ...

Astronomers have discovered fresh evidence suggesting the possible existence of an unseen planet in the far reaches of our solar system.

A Strange Object Has Entered Our Solar System--and One Scientist Says It May Be an Alien Craft If it's not an asteroid or a comet, it ...

Astronomers have uncovered a massive new trans-Neptunian object, 2017 OF201, lurking at the edge of our solar system. With an orbit stretching 25,000 years and a size that may qualify it ...

A sizable world has been found in a part of the solar system that astronomers once thought to be empty. It probably qualifies as a dwarf planet, the same classification as Pluto.

Astronomers have discovered fresh evidence suggesting the possible existence of an unseen planet in the far reaches of our solar ...
