What are the different types of solar panels in the Netherlands?

There are three main types of solar panels you can get in the Netherlands: monocrystalline panels, polycrystalline panels, and thin film panels. Monocrystalline panels are made using silicon and have an aluminium frame. These panels are more efficient in producing electricity from sunlight because of the structure of the cells.

Why should you invest in solar panels in the Netherlands?

The Netherlands offers a favorable environment for harnessing solar energy, both climatically and policy-wise. Financial benefits like subsidies and net metering make solar panel adoption economically attractive. Integrating solar panels with Dutch architectural styles enhances homes while promoting sustainability.

Should you install solar panels in the Netherlands?

Another reason to consider installing solar panels in the Netherlands right now is that the Dutch government will actually foot part of the bill. Currently, the Dutch government is offering a sustainable energy investment grant (ISDE) to compensate for the cost of energy-saving and sustainable installations.

How much do solar panels cost?

In addition, the specifications of the panels (such as power) and the cost of installation also play a role. On average, you pay around EUR500 to EUR600 per solar panel, including installation. The cost of solar panels depends on the number of panels and the power per panel. In general, the more panels you buy, the cheaper the price per panel becomes.

A standard system of 10 solar panels, including inverter and labor expenses, costs a Dutch citizen on average of EUR4400, or EUR1.63 for each Wp of capacity.

In 2025, an average system of 10 solar panels (about 3,700 Wp) will cost between EUR4,500 and EUR7,500, including installation and inverter. The exact price depends on several factors, such as ...
