-----

Companies from the IOGP membership participated in developing this specification to leverage and improve industry level standardization globally in the oil and gas sector.

This article introduces the working principles of uninterruptible power supply, main types including standby (offline) UPS, line-interactive UPS, online (double-conversion) UPS, ...

This specification describes three-phase Modular systems utilizing on-line, double conversion converter topology, solid-state uninterruptible power system, hereafter referred to as the UPS.

An uninterruptible power supply (UPS) helps prevent sudden shutdowns, data loss, and hardware damage by providing backup power when your main electricity fails.

The purpose of this specification is to define a minimum common set of requirements for the procurement of AC Uninterruptible Power Systems (UPS) in accordance with IEC 62040-3, ...

Single-phase uninterruptible power supplies (UPS) sit between an AC outlet and an electronic device to provide power conditioning, back-up protection, and distribution for electronic ...

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

An uninterruptible power supply, or UPS, is basically a surge protector, battery, and power inverter -- which turns the battery's stored energy into usable power -- in one.

3 Phase UPS power protection, solving today's energy challenges while setting the standard for quality and
