---

An official from Chiyoda Ward gives a speech at the opening ceremony of the pilot project to test a trailer equipped with power-generating glass in Akihabara, Tokyo.

By making the conventional SQPV glass, which has one cell per 30 cm square glass, multi-cell (11 x 6 cells) and improving the materials, the output value of the entire 30 cm ...

Not only does this system provide a high level of power generation efficiency, but it also comes in several varieties, including one that protects privacy and one that secures the ...

Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that ...

Currently, inQs is testing these solar windows at Kaijo High School in Tokyo. There, the panels have demonstrated their ability to not ...

Introducing examples of the adoption of AGC's "Sunjoule" series, which combines solar power generation capabilities with the bright space unique to glass. AGC's solar power-generating ...

A Japanese chemical manufacturer and construction com-pany have jointly developed "photovoltaic power generation glass" that can be installed on the external walls and windows ...

The invention uses glass that can utilize indoor and residual light and could supplant some of the energy generated by bulky rooftop solar panels. And unlike its common ...

Window glass that absorbs heat rays and generates electricity is installed in the city. We are currently developing next-generation heat ray shielding materials.

Not only does this system provide a high level of power generation efficiency, but it also comes in several varieties, including one ...

Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that could turn any pane of clear glass into a ...

Currently, inQs is testing these solar windows at Kaijo High School in Tokyo. There, the panels have demonstrated their ability to not only generate renewable energy but ...
