When did Saint Lucia start regulating electricity?

In 2010, Saint Lucia began a process to revise the electricity regulatory framework (last updated in 2006), including the concessionary agreement, in line with national objectives to increase the use of renewable energy. In early 2016, a new independent National Utilities Regulatory Commission (NURC) was established.

How can smart charging benefit the electricity grid in Saint Lucia?

If smart charging approaches are utilized, the introduction of electric vehicles in Saint Lucia can benefit both LUCELEC and the electricity grid by providing additional storage resources and increasing total consumption of electricity without increasing the peak load.

What is the electricity generating capacity in Saint Lucia?

Total electricity generating capacity in Saint Lucia is about 93 MW. Fossil fuel-based generating capacity, operated by St. Lucia Electricity Services, Ltd. (LUCELEC), amounts to 88.4 MW, about 95 percent of total electricity generating capacity. Installed generating capacity from renewable energy is 4.7 MW, of which LUCELEC operates 3 MW.

How will energy storage benefit Saint Lucia?

These diverging interests make it difficult to secure a successful contract that benefits Saint Lucia. Energy storage, in the form of batteries, will play a role in the Saint Lucia electricity system by avoiding reserve capacity and facilitating the integration of variable renewable energy.

An appropriate mix of technologies needs to be carefully identified and the inclusion of grid-tied energy storage systems--battery energy storage systems (BESS), or other types of feasible ...

Their applications in free-cooling ventilation systems, solar energy storage solutions for short and long-term storage periods, and demand-side management strategies towards the road to zero ...

For decades, Saint Lucians have benefitted from a reliable power supply, but at a cost. Our reliance on
