-----

Over the past 20 years, wind turbine manufacturers have experimented with various drivetrain architectures, evolving their designs based on technological progress and ...

Drivetrain in this context includes the whole power conversion system: main bearing, shafts, gearbox, generator and power converter. The main aim of this article is to review the drivetrain ...

Did you know that more than 70% of wind turbine downtime is linked to gearbox-related issues? This makes the gearbox and drive train critical components for efficiency, ...

The main function of a drive train is power transmission, i.e. to convert the mechanical energy at the rotor hub of the wind turbine to electrical energy, and to send it to the load/grid.

The drivetrain converts mechanical power to electrical power and transmits the rotor loads to the bedplate and tower. The drivetrain in this context includes the entire power ...

One of the most important aspects of turbine reliability is the design of the main bearing system, which supports the drivetrain and experiences significant mechanical loads.

The drivetrain of a wind turbine is composed of the gearbox and the generator, the necessary components that a turbine needs to produce electricity. The gearbox is responsible for ...

In the area of gearboxes and hydraulics, Rexroth, a world leader for drive, control and motion solutions, is a strong partner for wind turbine manufacturers. The drive system determines ...

Wind turbine main shaft bearings spin at relatively low speeds of around 10 rpm. Also, they experience continually variable loads.

The drivetrain converts mechanical power to electrical power and transmits the rotor loads to the bedplate and tower. The drivetrain in ...

Wind turbine main shaft bearings spin at relatively low speeds of around 10 rpm. Also, they experience continually variable loads. In offshore applications, turbine bearings may be ...

At the core of every wind turbine lies a complex and powerful system that enables the conversion of wind energy into electricity. One of ...
